

A woman is shown from the chest up, showering. She has her eyes closed and a serene expression, looking upwards. Her dark hair is wet and slicked back. She is holding a black showerhead with the brand name 'AQUADEI' visible on its handle. Water is spraying from the showerhead onto her hair and face. Her hands are visible, one holding the showerhead and the other resting on her neck. The background is a bright, out-of-focus green, suggesting a natural setting. A dark green horizontal bar is overlaid on the image, containing the brand name and tagline in white text.

ULTRAFINE BUBBLE TECHNOLOGY

MIZUE®

Introducing **MIZUE**[®]

Innovative Ultrafine Bubble Technology

Our Mizue[®] Ultrafine Bubble (UFB) nozzle integrates seamlessly with standard shower heads, producing millions of nanoscopic bubbles that penetrate the water stream. These bubbles improve hydration efficiency and enhance cleaning performance at the microscopic level- with just a slight change in water pressure or flow.

Aquadei Mizue®— Blessed by the Water

Reimagine yourself transported to an ancient Japanese onsen, where time slows and the soul is renewed by sacred, healing waters.

Aquadei introduces **Mizue®**, a breakthrough in Japanese water technology.

By simply adding **Mizue®** to your shower, you'll awaken your skin's natural vitality and radiance. Feel the gentle, silky touch of water transformed — delivering deep, lasting hydration while infusing every drop with softness and life-giving energy that refreshes the body, mind, and spirit.

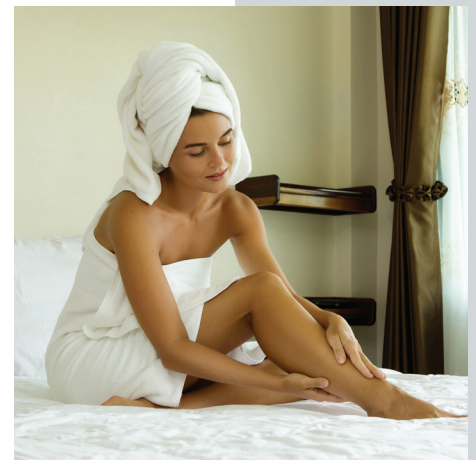

Experience a ritual reborn: glowing skin, youthful rejuvenation, and the pure bliss of being truly blessed by the water.

Key Benefits

- **Deep Hydration** – Ultrafine bubbles penetrate the skin's outer layer (stratum corneum), helping lock in moisture and reducing dryness greater than 40%.
- **Gentle Cleansing** – Dirt, oil and impurities are removed without harsh scrubbing or soap.
- **Gentle Warmth** – Elevates skin surface temperature for a soothing, spa-like feel.
- **Improved Scalp Health** – Resulting in hair that's shinier, silkier and easier to manage.

Perfect for

- Daily skincare routines
- Sensitive skin
- Scalp care and massage
- Soothing, spa-like showers

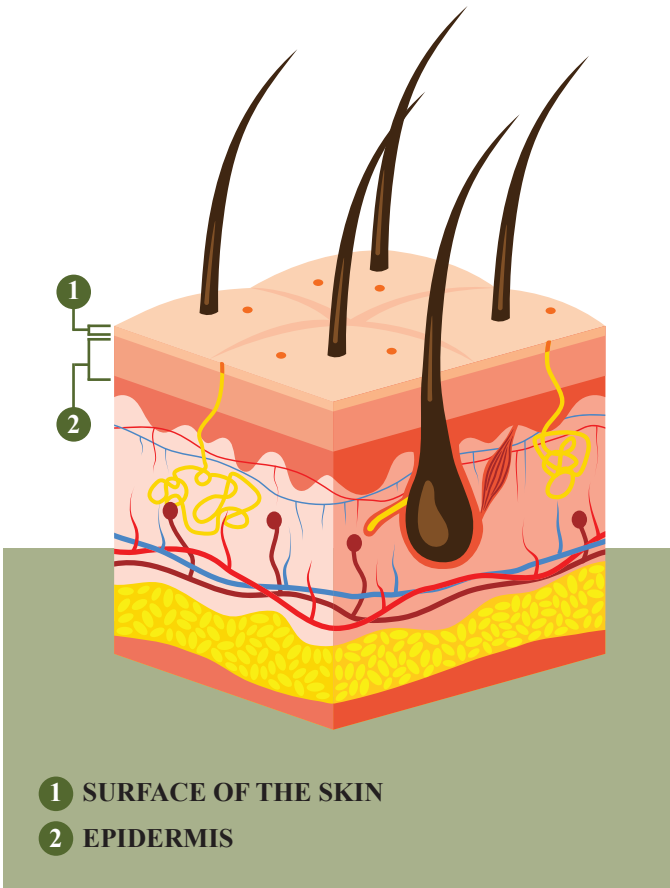

Elevate Your Everyday

Transform your shower into a wellness experience that delivers hydration, purification, and relaxation powered purely by water.

No tools. No chemicals. Just better skin, every day.

Billions of microscopic bubbles in a second turn ordinary water into a silky, skin-loving mist that cleans and hydrates more deeply than ever before.

1) Invisible Micro-Moisture

Each ultrafine bubble is thousands of times smaller than a grain of sand, allowing it to slip between the outer skin cells. This gives water longer contact time on the skin, helping it soak in rather than evaporate.

Result: skin feels hydrated, not tight or dry.

2) Naturally Charged for Hydration

Ultrafine bubbles carry a gentle negative charge that attracts and holds water molecules around the skin's surface. This helps lock in moisture and protect your natural barrier while lifting away dirt and oils.

Result: clean, balanced, refreshed skin — no stripping or irritation.

3) Softer Water, Deeper Hydration

Ultrafine bubbles refine the water's texture, enabling it to glide smoothly across the skin and reach delicate areas that ordinary water leaves untouched.

Result: water that actually feels softer and moisturizes more effectively.

4) Gentle Cleansing, Natural Balance

Instead of harsh pressure or soaps, bubbles lift away impurities through natural attraction. This means your skin's protective oils stay intact — keeping it moist, supple, and balanced.

The Following Results Were Observed In Blinded Study:

Without Mizue®	With Mizue®	Without Mizue®	With Mizue®
<p>After 5 min post shower: 6.4 % increase in moisture content on the surface of the skin</p>	<p>After 5 min post shower: 211% increase in moisture content on the surface of the skin</p>	<p>After 5 min post shower: 0.23% increase in moisture content in the epidermis</p>	<p>After 5 min post shower: 41% increase in moisture content in the epidermis</p>
<p>After 15 min post shower: 14 % decrease in moisture content on the surface of the skin</p>	<p>After 15 min post shower: 205% increase in moisture content on the surface of the skin</p>	<p>After 15 min post shower: -0.93% decrease in moisture content in the epidermis</p>	<p>After 15 min post shower: 31% increase in moisture content in the epidermis</p>
